

Internal Creative & Engineering Brief

Project

CEO Rules — Brand Experience Website

Document Version: 1.0

Classification: Internal Use Only

1. Executive Note

Aditya,

This is one of the most important projects we have taken up so far.

Read that sentence again.

This is **not** because it is technically difficult.

This is because this project is an opportunity for OnShore Labs to demonstrate what kind of company we are.

There are thousands of agencies that can build websites.

There are thousands of developers who can recreate layouts from Dribbble.

There are thousands of AI-assisted developers who can generate beautiful code.

That is **not** what we are doing.

Our **job is to understand a business so deeply that its digital presence feels inevitable—as if it always existed that way.**

The owner of CEO Rules has not hired us.

He has not committed to building this website.

He has simply asked us to show him what we think his website **should look and feel like.**

That means this **website is itself our proposal.**

If he feels we truly understood his brand, he will become our client.

If he feels we simply built another premium-looking website, we lose.

Every single decision you make throughout this project should therefore answer one question:

“Does this feel like CEO Rules?”

Not:

- Does this look premium?
- Does this look modern?
- Does this use the latest animations?
- Does this impress other developers?

None of those matter.

The only thing that matters is whether the owner looks at the experience and says:

“These people understood my brand.”

That is success.

2. Project Mission

Our mission is not to build a website.

Our mission is to **translate a 145-year-old tailoring house into a digital experience.**

The **website should feel exactly like walking into CEO Rules for the very first time.**

It should create emotion before it creates understanding.

It should create curiosity before it creates information.

It should create aspiration before it creates conversion.

Visitors should **not immediately think:**

“This is a tailoring website.”

Instead they should think:

"I want to know more."

The website should reveal itself gradually.

Like entering an expensive private atelier.

Like meeting someone who immediately earns your respect without asking for it.

The website should never chase attention.

It should command attention.

3. What This Website Is

This website is:

- A digital flagship.
 - A brand experience.
 - A cinematic story.
 - A founder-led narrative.
 - A luxury editorial.
 - A digital atelier.
 - A living representation of CEO Rules.
-

4. What This Website Is NOT

This website is NOT:

- an ecommerce website
- a Shopify template
- a landing page
- a corporate website
- a brochure
- a portfolio
- a catalogue
- a collection of sections
- a UI exercise

- a playground for animations
- a showcase of technical skill

If at any point the project starts feeling like one of the above, stop and reassess.

5. Understanding the Assignment

The owner never asked us for features.

He asked us for belief.

He wants to know whether we understand what CEO Rules stands for.

That means our first deliverable is not code.

Our first **deliverable is confidence.**

The website should convince him that nobody else could have built something this authentic.

6. The Core Philosophy

Everything in this project revolves around one principle:

Emotion before Information.

People do not remember sections.

They remember feelings.

People rarely remember animations.

They remember atmosphere.

People rarely remember paragraphs.

They remember stories.

Everything we build must prioritize emotion over explanation.

7. The OnShore Labs Standard

Every premium website we build must satisfy the following principles:

1. Brand first.
2. Story second.
3. Design third.
4. Technology fourth.

Technology exists only to support the story.

Never the other way around.

8. Non-Negotiables

These are mandatory.

No compromises.

8.1 Understand Before Building

Do not begin implementation until you fully understand the brand.

If something does not make sense,
research.

If something feels generic,
improve it.

If something feels copied,
replace it.

Ownership is expected.

8.2 Build With Intention

Nothing should exist simply because it looks good.

Every section.

Every image.

Every transition.

Every animation.

Every spacing decision.

Every font.

Every color.

Every interaction.

Everything must have a reason.

If you cannot explain why something exists,

it probably shouldn't.

8.3 Luxury Means Restraint

Luxury is not decoration.

Luxury is confidence.

Do not over-design.

Do not over-animate.

Do not over-write.

Leave breathing room.

Let the experience feel expensive.

8.4 Respect the User

Never waste attention.

Every scroll should reward curiosity.

Every interaction should feel meaningful.

The user should always feel guided.

Never manipulated.

9. Expectations From You

I expect ownership.

Not task execution.

If you discover a better solution,
present it.

If you discover a flaw,
raise it.

If you think something can be significantly improved,
improve it.

You are expected to think like a Product Engineer.

Not like someone completing tickets.

10. AI-Assisted Development Expectations

You are encouraged to use Claude Code, Cursor, ChatGPT, and any other AI tooling available.

However:

AI is your collaborator.

Not your replacement.

Never accept generated code blindly.

Review it.

Understand it.

Refactor it.

Improve it.

Maintain consistency across the codebase.

Prioritize readability over cleverness.

Maintainability over shortcuts.

Performance over unnecessary complexity.

11. Quality Bar

Throughout this project, repeatedly ask yourself the following questions:

- Would Apple ship this interaction?
- Would this feel comfortable on a Rolls-Royce website?
- Does this animation add meaning?
- Does this typography feel intentional?
- Does this section deserve to exist?
- If the CEO Rules logo were removed, would someone still recognize the personality of the brand?

If the answer is “no,” continue improving.

12. Definition of Success

The project is successful when:

The owner feels understood.

The website communicates identity before services.

The founder feels like the soul of the experience.

The brand feels timeless rather than trendy.

Visitors leave with a stronger emotional connection than when they arrived.

Every design choice feels inevitable.

Every line of code supports the experience.

Nothing feels unnecessary.

Nothing feels unfinished.

Nothing feels generic.

Nothing feels copied.

This is the standard expected from every premium project delivered by OnShore Labs.

PART II — CEO RULES BRAND INTELLIGENCE

This chapter is the foundation of the project.

Nothing should be designed or developed before fully understanding what is written here.

If this chapter is misunderstood, every subsequent design decision will be wrong, no matter how beautiful the website looks.

1. Introduction

Before we build a single component, write a single line of code, or choose a single font, we need to answer one question:

What exactly are we translating into a digital experience?

Not clothing.

Not tailoring.

Not luxury.

Not heritage.

Those are outputs.

Our job is to understand what CEO Rules actually represents.

The website is not meant to digitize a tailoring business.

It is meant to digitize a philosophy.

2. The Mistake Most Agencies Would Make

If ten agencies were asked to build this website, nine would probably create something like this:

- Hero image of a man wearing a suit.
- About Us section.
- Heritage timeline.
- Products.
- Testimonials.
- Contact form.

Technically correct.

Completely forgettable.

That website could belong to any premium tailoring house in the world.

We are not building **a tailoring website**.

We are building **the CEO Rules website**.

That distinction changes everything.

3. Understanding CEO Rules

The name “CEO Rules” creates one expectation.

The reality creates another.

That contradiction is one of the strongest assets of the brand.

The name sounds like:

- hustle culture
- startup culture
- business motivation
- entrepreneurship
- loud ambition

The reality is almost the opposite.

Inside the store lives:

- heritage
- craftsmanship
- quiet confidence
- patience
- education
- mentorship
- elegance
- family tradition

This tension is not a problem.

It is the brand’s biggest differentiator.

Do not resolve this contradiction.

Celebrate it.

4. The Real Product

CEO Rules does not sell suits.

CEO Rules does not sell tailoring.

CEO Rules does not even sell bespoke craftsmanship.

Those are merely the medium.

The real product is:

Confidence that feels earned.

The customer walks in believing he needs better clothes.

He walks out believing he has become a better version of himself.

That emotional transformation is what we are designing for.

5. The Customer's Internal Journey

Most customers are not struggling financially.

Quite the opposite.

Many of them have already become successful.

But success introduces a different insecurity.

Questions like:

Do I belong in these rooms?

Am I dressed correctly?

Am I making mistakes without realizing it?

Do successful people notice things I don't?

Am I trying too hard?

These questions are never spoken aloud.

But they exist.

CEO Rules answers those questions.

Not through advertising.

Through guidance.

The website should therefore reduce anxiety.

Not increase aspiration.

The visitor should feel:

"I've found someone who understands."

rather than

"I've found another luxury brand."

6. What Customers Are Actually Buying

On paper:

A bespoke suit.

Emotionally:

Belonging.

Identity.

Respect.

Confidence.

Quiet authority.

Maturity.

Taste.

The website must continuously reinforce this idea.

Do not obsess over fabrics. ■

Obsess over transformation.

7. The Transformation

Before CEO Rules:

“I have money.”

After CEO Rules:

“I have presence.”

Before:

“I hope people take me seriously.”

After:

“I no longer need to ask.”

Before:

“I’m wearing expensive clothes.”

After:

“I’m wearing clothes that belong to me.”

This transformation is the story.

Everything else supports it.

8. The Founder Is Not an “About Us” Section

One of the biggest mistakes we can make is treating Anis Soomar like every other founder.

He is not simply the owner.

He is not the CEO.

He is not the face of the company.

He is the medium through which the brand exists.

Without him, CEO Rules becomes another tailoring business.

With him, CEO Rules becomes a philosophy.

The website must therefore make him feel like:

- mentor
- teacher
- craftsman
- guide
- storyteller

Never simply “founder.”

9. Founder Psychology

Everything visible on Instagram suggests that Anis does not enjoy selling.

He enjoys teaching.

That is an enormous difference.

Most brands use education as marketing.

CEO Rules uses education as generosity.

The website should inherit that philosophy.

The visitor should never feel sold to.

They should feel guided.

Every section should answer:

“What would Anis naturally say if someone walked into the store?”

That should become the copy.

10. The Brand Archetypes

CEO Rules is built on multiple archetypes.

Primary

The Mentor.

The experienced craftsman.

The trusted advisor.

Someone who shares knowledge freely.

Secondary

The Ruler.

Authority.

Presence.

Confidence.

Leadership.

Not because of wealth.

Because of mastery.

Supporting

The Creator.

Attention to detail.

Craftsmanship.

Patience.

Perfection.

Together these create something very rare.

Power delivered with warmth.

Authority delivered through generosity.

11. The Hidden Contradictions

This is perhaps the most valuable insight about the brand.

CEO Rules is memorable because it constantly balances opposites.

Old heritage.

Modern ambition.

Luxury.

Approachability.

Power.

Warmth.

Education.

Exclusivity.

Mumbai.

European tailoring.

Traditional craftsmanship.

Contemporary personality.

The website should intentionally preserve these tensions.

Do not flatten them.

12. Heritage

Heritage is important.

But heritage is not the headline.

Too many luxury brands immediately say:

Established 18XX.

Family owned.

Legacy.

Customers don't emotionally connect with dates.

They connect with meaning.

Heritage should feel like a discovery.

Almost like a plot twist.

The visitor should first become emotionally invested.

Only then should they discover:

"This house has existed since 1881."

At that moment,

145 years suddenly means something.

13. Why Education Matters

One of CEO Rules' biggest competitive advantages is that they educate.

Most luxury brands protect information.

CEO Rules shares it.

That creates trust.

The website should reflect this.

It should feel like a place where knowledge is respected.

Not hidden.

The visitor should leave having learned something.

Even if they never become a customer.

14. Emotional Positioning

The emotional territory owned by CEO Rules is:

The transition from success to significance.

Not wealth.

Not fashion.

Not status.

Significance.

It teaches successful people how to carry success gracefully.

That is much deeper than tailoring.

15. What Makes CEO Rules Different

There are many bespoke tailors.

There are many luxury brands.

There are many heritage businesses.

Very few combine:

145 years of craftsmanship

-

Founder-led education

-

Warmth

-

Approachability

-

Luxury

-

Mumbai personality

-

Quiet confidence

This combination is unique.

The website should amplify this uniqueness rather than imitate international luxury brands blindly.

16. The Feeling We Are Selling

The website should never sell clothing.

It should sell a feeling.

That feeling can be described as:

Walking into a room and knowing you belong there.

Nothing more.

Nothing less.

17. What the Visitor Should Feel While Scrolling

This is one of the most important sections in the entire document.

At every stage of the journey, we are designing emotions.

Landing.

Curiosity.

“This doesn’t feel like a tailoring website.”

Respect.

“These people know what they’re doing.”

Trust.

“I’d actually listen to this founder.”

Connection.

“This brand feels human.”

Aspiration.

“I want to become this version of myself.”

Action.

“I want to visit.”

Never interrupt this emotional progression.

Every section should move the visitor forward.

Nothing should reset the emotion.

18. What the Website Should Never Feel Like

It should never feel:

Corporate.

Sales-driven.

Over-designed.

Artificial.

Trendy.

Flashy.

Overly masculine.

Intimidating.

Minimal just for the sake of minimalism.

Pretending to be European.

Trying too hard to look luxurious.

Luxury should emerge naturally from confidence.

Not decoration.

19. The Core Brand Sentence

If someone asks you what CEO Rules is,

your answer should not be:

“A bespoke tailoring house.”

Your answer should be:

CEO Rules is a house that teaches self-made men the quiet language of confidence through timeless craftsmanship.

Everything we build should reinforce that sentence.

20. Design Implications

Everything we’ve learned now affects implementation.

Because the brand is mentor-led:

→ The website should guide.

Not sell.

Because the brand values restraint:

→ Motion should be slow.

Not flashy.

Because the brand values craftsmanship:

→ Details should matter.

Micro-interactions should feel intentional.

Typography should feel refined.

Spacing should breathe.

Because the brand values confidence:

→ Copy should never shout.

Because the founder is the emotional center:

→ The founder should appear naturally throughout the experience rather than being isolated in one “About” section.

Because the brand believes in education:

→ Every section should leave the visitor slightly wiser than before.

Final Principle

Never forget this sentence while working on this project:

We are not building a website for a tailoring business.

We are building a digital experience for a philosophy that happens to express itself through tailoring.

If every design decision, every interaction, every animation, every line of code, and every word of copy aligns with that principle, the owner will feel that we understood something much deeper than his business.

He will feel that we understood his life's work.

PART III — WEBSITE EXPERIENCE BLUEPRINT

1. Objective

The objective of this website is not to explain CEO Rules.

It is to make visitors feel CEO Rules.

By the end of the experience, visitors should not simply know what the brand does.

They should understand why it exists.

The website should create enough curiosity, trust, and emotional connection that the natural next step feels like visiting the store.

2. Homepage Experience

The homepage should be experienced as a story.

Not as a collection of sections.

Every section should naturally lead into the next.

The emotional journey should be:

Curiosity

Respect

Trust

Connection

Aspiration

Action

At no point should the emotional momentum be broken.

3. Homepage Structure

Section 1 — Hero

Purpose

Create immediate curiosity.

The visitor should instantly realize this is not another tailoring website.

Emotion

Curiosity.

Visual Direction

Large cinematic imagery or slow video.

Minimal copy.

Strong typography.

No visual clutter.

CTA

Visit the Atelier

or

Book a Consultation

Section 2 — Brand Manifesto

Purpose

www.onshorelabs.co.in

Introduce the philosophy behind CEO Rules.

Not the business.

Emotion

Connection.

The visitor should begin understanding what the brand believes.

Section 3 — Identity

Purpose

Explain what CEO Rules actually represents.

This is not about clothing.

This is about confidence.

This section should communicate transformation rather than products.

Section 4 — Heritage

Purpose

Reveal the heritage naturally.

This should feel like discovering something meaningful rather than reading an About section.

Introduce:

Established 1881

Family legacy

Craftsmanship

Trust

Section 5 — The Craft

Purpose

Demonstrate mastery.

Not through paragraphs.

Through visuals.

Fabric.

Measurement.

Construction.

Details.

Precision.

The visitor should understand that craftsmanship is treated as an obsession.

Section 6 — Meet Anis Soomar

Purpose

Humanize the brand.

The founder should feel like a mentor rather than a businessman.

This should become the emotional center of the website.

The visitor should feel like they have met the person behind the philosophy.

Section 7 — The Wardrobe

Purpose

Showcase the outcome.

Not products.

Identity.

Display:

Bespoke suits

Bandhgalas

Sherwanis

Accessories

Present them editorially.

Never like an ecommerce catalogue.

Section 8 — Testimonials

Purpose

Reinforce trust.

Testimonials should feel genuine.

Simple.

Elegant.

Not corporate.

Section 9 — Visit CEO Rules

Purpose

Create a natural ending.

Not a sales pitch.

The visitor should already want to visit.

This section simply removes friction.

Include:

Address

Map

WhatsApp

Opening hours

Consultation CTA

Footer

Minimal.

Elegant.

Nothing unnecessary.

PART IV — DESIGN SYSTEM

Everything on this website should feel intentional.

Typography should feel editorial.

Spacing should breathe.

Images should dominate.

Copy should support.

Never the other way around.

Typography

Elegant serif headlines.

Clean sans-serif body text.

Large typography.

Generous spacing.

Minimal words.

Colors

Warm charcoal.

Off-white.

Deep browns.

Forest green.

Muted gold accent.

Gold should be used sparingly.

It should feel precious.

Not decorative.

Photography

Only authentic photography.

No stock images.

No AI-generated business people.

Use real imagery from CEO Rules wherever possible.

Photography should feel warm.

Textured.

Human.

Editorial.

Motion

Animations should move like fabric.

Never bounce.

Never feel playful.

Every animation should have weight.

Motion should create elegance.

Not excitement.

Buttons

Simple.

Refined.

No oversized rounded buttons.

No flashy hover effects.

Luxury whispers.

It never shouts.

White Space

Use generous spacing.

Luxury is communicated through restraint.

Not through decoration.

PART V — ENGINEERING EXPECTATIONS

Code quality should reflect the same craftsmanship as the tailoring.

Technology

Preferred Stack

Next.js

Tailwind CSS

Framer Motion

GSAP only where absolutely necessary.

Performance

Fast loading.

Optimized images.

Responsive videos.

Smooth animations.

No animation should reduce usability.

Code Standards

Reusable components.

Readable architecture.

Maintainable code.

Consistent naming.

Clean folder structure.

No unnecessary dependencies.

AI Usage

Claude Code.

Cursor.

ChatGPT.

All are encouraged.

None are excuses for poor engineering.

Review every generated line of code.

Understand it before shipping it.

PART VI — REFERENCES

Study these websites.

Not to copy.

To understand pacing, restraint, storytelling and luxury.

Loro Piana

Brunello Cucinelli

Zegna

Tom Ford

Rolls-Royce

Aman Resorts

Apple

Ask yourself while studying them:

Why does this feel premium?

Why is there so much whitespace?

Storytellers

Why is there so little copy?

Why does the scrolling feel effortless?

Why do the animations feel expensive?

PART VII — DEFINITION OF DELIVERABLE

The final delivery should include:

- ✓ Fully responsive website
 - ✓ Desktop optimized
 - ✓ Mobile optimized
 - ✓ Smooth premium animations
 - ✓ Optimized performance
 - ✓ SEO-ready implementation
 - ✓ Production-quality code
 - ✓ Clean project structure
 - ✓ Image optimization
 - ✓ Video optimization
 - ✓ Cross-browser compatibility
 - ✓ README with setup instructions
 - ✓ Deployment-ready build
-

PART VIII — FINAL SELF REVIEW

Before considering the project complete, answer the following honestly.

Does the website feel like CEO Rules?

Would the owner feel understood?

Does the website create emotion before information?

Does the founder feel central to the experience?

Does every section deserve to exist?

Does every animation have purpose?

Does every visual element contribute to the story?

Could any section be removed without affecting the experience?

If yes, remove it.

Does the website feel timeless rather than trendy?

Would OnShore Labs proudly showcase this as one of its best projects?

If the answer to any question is “No”, continue refining until the answer becomes “Yes.”

FINAL NOTE

This project is intentionally difficult.

Not because the technology is difficult.

Because restraint is difficult.

Anyone can build a visually impressive website.

Very few people can build a website that feels inevitable.

Your objective is not to build a beautiful website.

Your objective is to build a website where the owner looks at it and says:

“This feels like us.”

If we achieve that, the project has succeeded.

If we fail to achieve that, no amount of beautiful code or animations will compensate.

That is the standard expected at OnShore Labs.
