

CEO RULES

Website Final Rehaul & Production Brief

Project objective

Take the existing CEO Rules website from its current prototype state to a **finished, production-ready luxury tailoring website**.

This is not a request for incremental CSS improvements.

The site needs a complete final visual-art-direction pass covering:

design + photography + video + responsive behaviour + motion + appointment booking + Instagram + sound + performance + final QA.

The finished website should feel comparable in polish to an international luxury menswear house while retaining CEO Rules' own identity.

The desired reaction is essentially:

I want this man to dress me.

Do not put that sentence on the website. It is the internal creative objective.

1. BRAND UNDERSTANDING

CEO Rules is a **private tailoring house in Mumbai**.

The family has been in the **clothing industry for six generations**, with its history tracing to 1881.

Important distinction:

Do not claim six generations of tailoring.

The proposition combines:

Heritage + exceptional cloth + bespoke craft + Anis Soomar's eye/taste + personal service + contemporary confidence.

CEO Rules should not feel like:

- a fashion e-commerce website
- a generic “luxury” template
- an old British tailoring house imitation
- a startup/SaaS website
- a black-and-gold premium template
- a museum about 1881

The heritage gives the brand authority.

It should **not make the website look historical**.

Brand personality

Cultivated. Assured. Personal. Exacting. Warm.

The website should feel like entering a **private tailoring salon**.

Anis is one of the biggest differentiators.

Heritage competitors can own lineage.

CEO Rules should increasingly own:

taste, judgement, personality and dressing the individual man.

2. VISUAL NORTH STAR

The biggest design rule:

Photography is architecture.

Do not build colored sections and then place photographs inside them.

Wherever strong photography exists, the photograph should become the section itself.

Think:

FULL-BLEED PHOTOGRAPH → TYPE OVER PHOTOGRAPH → FULL-BLEED PHOTOGRAPH → QUIET EDITORIAL BREATH → FULL-BLEED PHOTOGRAPH

Not:

cream box → image card → navy box → image card → cream box → grid

The homepage in particular should feel like a continuous editorial film.

Reference principle

Use sites such as Heritage 1881 and premium international menswear/fashion houses for **spatial confidence and photographic storytelling**, but do not copy their identity.

CEO Rules should feel:

younger, sharper, more personal, more Mumbai, more Anis-led.

3. EXISTING BRAND SYSTEM

Retain the established CEO Rules visual system unless there is a strong design reason to refine individual values.

Typography

Primary:

Instrument Sans

Editorial accent:

Newsreader

Instrument Sans should do most of the work.

Newsreader should be selective, not automatically applied whenever something needs to look “luxury.”

Colours

Primary foundation:

- House Ivory
- House Ink
- Midnight Wool
- CEO Rules official blue

Warm walnut/material colours should primarily come from photography.

Antique brass can be extremely restrained.

Official logo

Use the **official CEO Rules wordmark**.

It must retain its **original blue**.

Do not recreate it using text.

Do not recolour it white simply because it is placed against photography.

CEO Rules Blue is a signature accent, not the main website colour.

4. PHOTOGRAPHY

This is now the single most important part of the website.

The current source photography is often too small, compressed or compositionally unsuitable for full-screen presentation.

Do not solve bad photography with CSS.

Minimum production standard

For major desktop photographic fields:

2400px wide minimum preferred.

3000px+ masters are better.

Avoid using 600–1000px images as full-screen desktop campaign imagery.

Every major photograph should have

- clear subject
- deliberate crop
- tactile fabric detail
- realistic skin
- believable CEO Rules environment
- controlled colour grade
- intentional negative space where text is expected
- no watermarks
- no Instagram UI
- no baked-in text
- no obvious AI artifacts

Photography categories

The House

Storefront, architecture, interiors, fabric shelves, mirrors, walnut cabinetry.

The Man

Anis with clients, fitting, talking, selecting cloth.

The Hands

Cutting, stitching, chalking, measuring, buttonholes, canvas.

The Cloth

Cloth books, swatches, wool, shirting, hands making selections.

The Garment

Finished suits, jackets, tuxedos, bandhgala, sherwani, movement and fit.

Archive

Only authentic historical material.

Never generate fake historical photographs.

5. HOMEPAGE

The homepage narrative should be:

PLACE → MATERIAL → MAKING → MAKER → MAN → HISTORY → INVITATION

01. Storefront / Hero

Use the enhanced daytime CEO Rules storefront.

Full width.

No image card.

No margins around the photograph.

No separate giant cream hero statement section.

The photograph should immediately establish the physical house.

Copy:

MUMBAI · SINCE 1881

Private tailoring for a more considered life.

Book a Private Appointment →

Text must be art-directed into genuine negative space.

Do not put text over important signage, mannequins or architectural details.

Do not solve readability with a generic black overlay.

A very subtle localized tonal treatment is acceptable where genuinely necessary.

6. THE CLOTH

This needs new high-resolution imagery.

Full-bleed photograph of cloth selection/books/swatches.

Desired mood:

intimate, tactile, sophisticated, dark/warm atelier, premium fabric.

Copy:

THE CLOTH

A wardrobe begins in the book.

Supporting cloth houses:

Loro Piana · Zegna · Scabal · ALUMO · Söktas

These are confirmed.

Do **not** introduce Dormeuil or Holland & Sherry.

Do not use a logo carousel.

The mill names are proof, not the visual hero.

7. THE CRAFT

Core line:

THE CRAFT

Most of the work never shows.

Use photography/video to show:

01 / THE CUT

Every line begins on the table.

02 / THE CANVAS

Structure without stiffness.

03 / THE FIT

Adjusted on the man, not the form.

04 / THE FINISH

The work most people never see.

These should feel like consecutive moments inside an atelier.

No cards.

No four-column feature grid.

No doodle illustrations replacing real craft.

Photography/video should dominate.

Ideal imagery/video

Cut:

shears physically cutting wool.

Canvas:

close-up of basted jacket/canvas construction.

Fit:

Anis or CEO Rules tailor fitting a real client.

Finish:

hand stitching, buttonhole, pick stitch, lining or another unmistakably garment-specific finishing process.

8. THE EYE

This section is about **Anis Soomar**.

Do not turn it into a generic “Meet the Founder” section.

Heading:

THE EYE

ANIS SOOMAR

Use excellent authentic photography or video of Anis working with someone.

The visitor should understand that CEO Rules' value isn't simply access to expensive fabric.

It is judgement.

His ability to understand:

- proportion
- fit
- cloth
- occasion
- personality
- how a man should actually wear something

Keep the copy short.

Photography does most of the work.

9. THE WARDROBE

This is the payoff.

We need a genuinely aspirational finished-garment photograph/video.

Not a mannequin if a strong human image is available.

Not a watermarked image.

Not a catalogue grid.

Categories:

Suits · Shirts · Jackets · Tuxedos · Bandhgalas · Sherwanis

The section should communicate:

this is what the house can create for you

rather than:

here is our product catalogue.

Link to the deeper Wardrobe page.

10. THE HOUSE / HERITAGE

This is where photography should temporarily give way to quiet editorial space.

Core factual language:

Six generations in the clothing industry.

History traces to **1881**.

Do not write “six generations of tailoring.”

Heritage should establish credibility without taking over the entire brand.

Use one strong client story/testimonial on homepage rather than competing testimonials everywhere.

Additional history and stories can live on The House page.

11. VISIT / APPOINTMENT

End with a quiet invitation.

Suggested:

Come sit with us in Bandra.

Follow with address, opening hours, directions and appointment CTA.

The tone should feel personal.

Not:

BOOK NOW

More:

Book a Private Appointment

12. CALENDLY

Integrate Anis’s Calendly booking flow.

Current intended Calendly:

anis-ceorules / 30min

Confirm final event URL before production.

Do not ask for or store his Calendly password.

Preferred UX

Create a proper:

/appointment

experience.

CEO Rules branding at the top.

Short introduction.

Calendly booking integrated elegantly.

Do not dump an ugly raw iframe into the homepage.

Homepage/header CTAs should route into the appointment experience.

Verify Calendly configuration

- correct physical location
- duration
- Anis's availability
- calendar connection
- buffers
- confirmation email
- reminders
- timezone handling
- intake questions

Useful intake questions:

Name

Email

Phone / WhatsApp

What brings you in?

Suit / Shirt / Jacket / Tuxedo / Bandhgala / Sherwani / Fitting / Other

Optional notes

13. INSTAGRAM

Add CEO Rules social content intelligently.

Do **not** make the website look like an Instagram feed.

Use selected high-quality Reels as editorial content.

Potential section:

FROM THE HOUSE

or similar.

Embed approximately **3 selected Reels**, not a giant feed.

They should show personality/craft/style and especially Anis where appropriate.

Desktop could present three editorial vertical films.

Mobile should allow natural vertical consumption.

Important

Avoid:

- Instagram profile chrome dominating the design
- huge social-feed widgets
- ten-post grids
- follower counts
- generic plugin styling

If native Instagram embeds are visually ugly, explore using approved thumbnails/posters with links/open behaviour rather than allowing Instagram UI to damage the art direction.

14. VIDEO

Video should eventually become a major part of the experience.

Do not create a separate “Videos” page.

Videos replace selected photographic fields.

Priority shots:

1. Exterior arrival
2. Hands paging cloth books
3. Shears cutting cloth
4. Basting/canvas construction
5. Live fitting
6. Hand finishing

7. Anis talking/fitting
8. Finished client adjusting jacket/walking

Treatment

- muted
- inline
- autoplay only where browser policy permits
- playsinline
- seamless loop where appropriate
- no player chrome
- no YouTube-looking controls
- strong poster image
- lazy loaded
- respect reduced-motion settings

Video should feel like moving photography.

15. BESPOKE PROCESS

Create a visually excellent process experience on **The Bespoke / relevant service page**, rather than cluttering homepage.

Stages:

- 01 Private Consultation**
- 02 Fabric Selection**
- 03 Measurement**
- 04 Fitting & Reshaping**
- 05 Final Hand-Finishing**
- 06 Delivery**

Use **real HD photography/video**, not doodles.

A carousel/sequence can work here if executed editorially.

One stage at a time.

Large photographic field.

Not six cards.

Not a product carousel.

On mobile, allow swipe.

16. MUSIC / SOUND EXPERIENCE

Introduce optional smooth jazz / sophisticated atelier ambience.

Desired mood:

- late-night hotel bar
- restrained piano
- brushed drums
- upright bass
- subtle saxophone
- elegant, warm, intimate

It should **not** sound like elevator music.

Technical requirements

Use a properly licensed commercial audio track hosted locally.

Do not rip Spotify/YouTube audio.

Browser autoplay restrictions must be respected.

Recommended behaviour:

After the visitor's **first genuine interaction**, music can gently fade in.

Volume approximately **10–15%**.

Fade in around **2 seconds**.

Provide a discreet persistent:

SOUND ON / SOUND OFF

control.

Audio should persist across internal route changes rather than restarting on every page.

Remember user's choice during the session.

No giant music player.

No album art.

No playback timeline.

No ceremonial splash screen just to enable audio.

17. NAVIGATION

Maintain current desktop architecture:

LEFT

THE HOUSE
THE BESPOKE

CENTER

official CEO RULES logo

RIGHT

THE WARDROBE
THE RULES
Visit the Atelier

Wardrobe **must remain in the primary desktop navigation.**

Mobile needs a properly art-directed navigation experience.

Do not simply shrink desktop nav.

18. PAGE ARCHITECTURE

Final site should properly resolve:

/

Homepage

/house

History, house, lineage, stories, Anis/family context

/the-cloth / The Bespoke architecture as appropriate

Cloth, construction, process, fabric houses

/the-wardrobe

What CEO Rules creates

/philosophy / The Rules

Anis's principles and point of view

/atelier

Physical house, appointment, process/location where appropriate

/appointment

Dedicated booking flow

/kazim

Keep standalone/private QR contact page. No main-site navigation link.

Review route naming before production so navigation labels and URLs make sense together.

19. KAZIM PAGE

Keep this extremely simple.

No main website navigation to it.

Purpose is QR/contact card.

Content:

CEO RULES

KAZIM SOOMAR

CEO Rules · Mumbai

WHATSAPP ↗

WEBSITE ↗

No bio.

No form.

No marketing content.

No social feed.

Keep:

`noindex, nofollow`

Use Kazim's actual WhatsApp number, not Anis's number.

20. MOTION

Motion should feel luxurious and almost invisible.

Good:

- subtle image reveal
- gentle typography reveal
- restrained parallax
- clip reveal inspired by cloth
- smooth hover behaviour
- subtle transitions

Bad:

- page loaders
- route curtains
- film grain
- scroll hijacking
- dramatic zooms
- constant animation
- animated decorative gimmicks

Respect:

`prefers-reduced-motion`

The website should still feel complete with motion disabled.

21. RESPONSIVE ART DIRECTION

Mobile is **not desktop squeezed down**.

Every important photographic section needs:

desktop crop + mobile crop decision.

Protect:

- faces
- hands

- garments
- signs
- cloth
- negative space for typography

If necessary, use different **object-position**, aspect treatment, or even dedicated mobile media.

Test at minimum:

1440px desktop

390px mobile

Also check common tablet widths.

22. ACCESSIBILITY

Production pass must include:

- semantic headings
- keyboard navigation
- visible but tasteful focus states
- sufficient text contrast
- descriptive alt text where meaningful
- decorative media ignored by assistive technology
- reduced-motion support
- usable booking experience via keyboard/mobile
- appropriate ARIA for menu/sound/carousel controls

Luxury does not justify unreadable 10px typography.

23. PERFORMANCE

Media-heavy luxury sites become terrible very quickly if assets aren't handled correctly.

Required:

- Next/Image where appropriate
- correct **sizes**
- responsive image variants
- WebP/AVIF where sensible
- poster images for video

- lazy load below-fold media
- preload only genuinely critical hero resources
- avoid shipping giant originals to mobile
- compressed production video
- prevent layout shift
- font optimization
- remove unused assets/code

The hero should load quickly enough that the first impression is intentional.

24. SEO / METADATA

Final production pass should include:

- unique title/meta description per indexed page
 - canonical URLs
 - Open Graph image
 - favicon/app icons
 - sitemap
 - robots configuration
 - LocalBusiness/appropriate structured data where valid
 - address/phone consistency
 - meaningful image alt text
 - noindex for [/kazim](#)
 - appropriate social sharing previews
-

25. ANALYTICS

Add basic conversion measurement.

At minimum track:

- Book a Private Appointment click
- Calendly booking completion where feasible
- WhatsApp click
- Directions click
- Instagram/Reel interaction
- phone click
- sound activation if useful
- page views

Do not add invasive tracking unnecessarily.

26. CONTACT DETAILS / OPERATIONAL FACTS

Before production, verify with Anis:

- official address
- Google Maps destination
- opening hours
- telephone / WhatsApp
- Calendly URL
- appointment duration
- Instagram profile
- selected Reels
- garment/service list
- cloth-house list
- exact heritage claims
- social links

Do not invent missing operational information.

27. CONTENT RULES

Avoid generic luxury copy such as:

“timeless elegance”

“unparalleled craftsmanship”

“where tradition meets modernity”

“meticulously crafted masterpieces”

CEO Rules should speak more directly.

Short, confident statements are stronger.

Examples of the desired voice:

A wardrobe begins in the book.

Most of the work never shows.

Adjusted on the man, not the form.

Come sit with us in Bandra.

28. THINGS THAT ARE BANNED

Do not introduce:

- glassmorphism
 - gradient text
 - giant gradients
 - black-and-gold luxury cliché
 - fake wood backgrounds
 - cards everywhere
 - rounded containers everywhere
 - pill buttons
 - floating badges
 - fake historical AI imagery
 - generic tailoring stock imagery
 - low-resolution full-screen photographs
 - huge logo walls
 - product-store conventions
 - page loaders
 - route curtains
 - scroll hijacking
 - film grain
 - unnecessary doodles
 - animations for their own sake
-

29. ASSET PRODUCTION

Before final design implementation, create an **asset audit**.

For every homepage/page image classify:

FINAL

Good enough for production.

TEMPORARY

Can prove layout but needs replacement.

REPLACE

Do not ship.

For every REPLACE asset, specify:

- subject
- orientation
- minimum resolution
- composition
- negative-space requirement
- lighting
- desired crop
- whether photo/video is preferred

Do this **before attempting to hide weak imagery through layout tricks.**

30. WORKING PROCESS

Do not attempt another giant blind redesign.

Work in visual checkpoints.

Checkpoint 1

Homepage Hero + Cloth.

Render desktop/mobile.

Get approval.

Checkpoint 2

Craft.

Render desktop/mobile.

Get approval.

Checkpoint 3

Anis + Wardrobe.

Render desktop/mobile.

Get approval.

Checkpoint 4

House + Visit + Footer.

Render full homepage.

Get approval.

Checkpoint 5

Interior pages.

Checkpoint 6

Calendly + Instagram + sound.

Checkpoint 7

Motion + responsive polish.

Checkpoint 8

Performance + accessibility + SEO + production QA.

Do not proceed based only on code/build success.

Every visual checkpoint requires actual screenshots.

31. DEFINITION OF DONE

The project is not complete because:

`npm run build` passes.

It is complete when:

- homepage feels like one coherent luxury editorial experience
- photography is genuinely high-resolution
- no major image looks pixelated
- text is readable without ugly overlays
- desktop crops are intentional
- mobile crops are independently intentional
- CEO Rules logo is correct
- all routes visually belong to the same house
- Anis is meaningfully represented
- heritage claims are correct
- cloth houses are correct
- appointment booking works end-to-end
- WhatsApp works

- Maps/directions work
- selected Instagram content works
- optional jazz experience works across navigation
- video behaves correctly
- mobile menu works
- keyboard/accessibility basics work
- reduced-motion works
- performance is acceptable
- SEO metadata is complete
- there are no obvious placeholders
- there are no watermarked assets
- there are no broken links
- there are no console errors
- production deployment is tested

Final test

Open the homepage at 1440px.

Scroll without reading.

The visual story should still be obvious:

**CEO RULES → THE HOUSE → CLOTH → CRAFT → ANIS → THE MAN → HERITAGE
→ APPOINTMENT**

Then open it at 390px.

It should feel deliberately designed again, not like the desktop site collapsed into one column.
